Peck Reservoir Replacement Project

The Peck Reservoir Replacement project continues with its next activity involving soil compaction and structural foundation work for the new reservoir.

It is anticipated that this work will be completed in February 2021.

### **Project Activity During Construction**

- Soil backfill
- Soil Compaction – two big drum roller machines will be utilized simultaneously for this task
- Truck delivery of base material – to be used for the structural foundation of the new reservoir

### **Impacts/Mitigation Measures**

- Potential vibration and noise from soil compaction activities
- Vibration monitoring to alert construction team of peak vibration activity
- Heavy traffic on Peck Avenue during work hours
- Driveway access, trash and delivery services will not be affected
- PLEASE NOTE: circumstances such as weather may prolong these activities until they are completed

### **Background**

The Peck Reservoir Facility, built in 1957, was identified as a top priority and recommended to be replaced as part of the 2010 Water System Master Plan. The new Peck Reservoir will increase its capacity to eight million gallons and include new state-of-the-art filtration and other equipment to serve the Manhattan Beach community for the next 75 years and help ensure the long-term dependability of the water system in the community.
