Peck Reservoir Replacement Project

Background

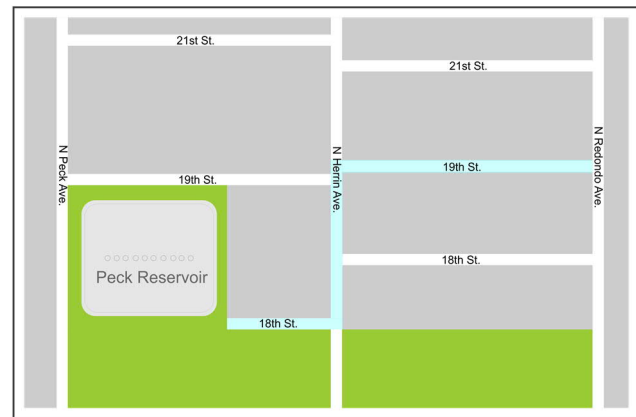

The Peck Reservoir Facility, built in 1957, was identified as a top priority and recommended to be replaced as part of the 2010 Water System Master Plan. The new Peck Reservoir will increase its capacity to eight million gallons and include new state-of-the-art filtration and other equipment to serve the Manhattan Beach community for the next 75 years and help ensure the long-term dependability of the water system in the community.

August 11, 2021

The Peck Reservoir Replacement Project includes **trench construction of offsite pipeline** connections to the reservoir. This work includes:

- 16-inch diameter well water pipeline
- 16-inch sanitary sewer pipeline
- 6'x6' injection line vault structure
- 2-inch injection line conduit

It is anticipated that this work will be completed in the fall.

Project Activity During Construction

- Construction signs to notify residents, drivers, pedestrians and cyclists of construction activity and parking restrictions
- Temporary parking restrictions and street closure impacts during work activity
- Trench excavation and installation of pipeline and underground vault structures
- Delivery of material and use of heavy equipment – pipes, excavator, backhoe, delivery trucks

Impacts

- Temporary parking restrictions in work areas on 18th Street, 19th Street and Herrin Avenue in work area
- Temporary street closures during work hours with advance notification
- Truck activity on 19th Street and Herrin Avenue during work hours
