Peck Reservoir Replacement Project

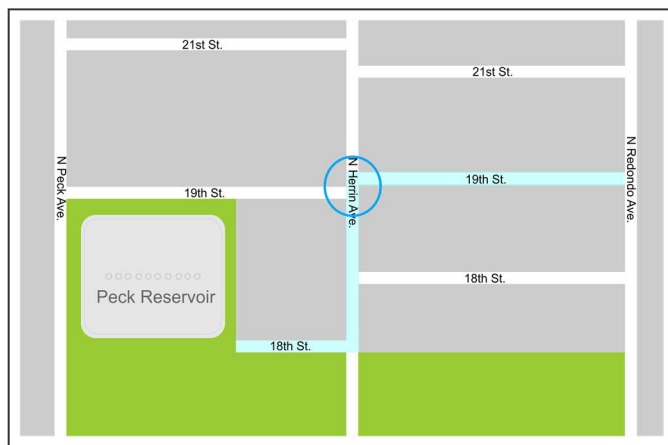

### Background

The Peck Reservoir Facility, built in 1957, was identified as a top priority and recommended to be replaced as part of the 2010 Water System Master Plan. The new Peck Reservoir will increase its capacity to eight million gallons and include new state-of-the-art filtration and other equipment to serve the Manhattan Beach community for the next 75 years and help ensure the long-term dependability of the water system in the community.

The Peck Reservoir Replacement Project offsite pipeline work continues. The offsite work includes a 16-inch diameter well water pipeline; 16-inch sanitary sewer pipeline; 6'x6' injection line vault and a 2-inch injection line conduit.

The 16-inch diameter well water pipeline is making its way north on Herrin Avenue to 19<sup>th</sup> Street.

The map below shows the work areas.

### Project Activity During Construction

Construction signs to notify residents, drivers, pedestrians and cyclists of construction activity and parking restrictions.

- **Temporary closure of the intersection at 19<sup>th</sup> Street/Herrin Avenue during work hours** – driveway access available at all times
- Trench excavation and installation of pipeline and underground vault on southeast corner of Herrin Avenue/19<sup>th</sup> Street
- Temporary parking restrictions and street closure in and around work area
- Delivery of material and use of heavy equipment – pipes, excavator, backhoe, delivery trucks

### Impacts

- No through-traffic on Herrin Avenue and 19<sup>th</sup> Street at the intersection
- Intermittent truck activity on Herrin Avenue, 19<sup>th</sup> Street and Redondo Avenue during work hours
- Immediate work area will be cordoned off
- Intersection and through-traffic will have limited access before and after work hours
