Peck Reservoir Replacement Project

The Peck Reservoir Replacement Project Team is pleased to announce that it has reached another milestone! The contractor will backfill around the newly built reservoir tank with the dirt stockpile at the Begg Sport Field. This process is anticipated to be completed in some time in November. The field will begin restoration activities once this backfilling process has been completed.

This activity is an important achievement towards the full completion of the reservoir and its facilities.

Impacts

- Dust control and other mitigation measures will be used when backfilling from the dirt stockpile
- Vibration is not anticipated for these activities

Background

The Peck Reservoir Facility, built in 1957, was identified as a top priority and recommended to be replaced as part of the 2010 Water System Master Plan. The new Peck Reservoir will increase its capacity to eight million gallons and include new state-of-the-art filtration and other equipment to serve the Manhattan Beach community for the next 75 years and help ensure the long-term dependability of the water system in the community.
