Peck Reservoir Replacement Project

Background

The Peck Reservoir Facility, built in 1957, was identified as a top priority and recommended to be replaced as part of the 2010 Water System Master Plan. The new Peck Reservoir will increase its capacity to eight million gallons and include new state-of-the-art filtration and other equipment to serve the Manhattan Beach community for the next 75 years and help ensure the long-term dependability of the water system in the community.

The Peck Reservoir Replacement Project offsite pipeline work continues with the installation of injection line vault lids. The contractor will work from the intersection on Herrin Avenue and 18th Street, through 19th Street.

The map below shows the work areas, with the work area highlighted in (insert color here):

Project Activity During Construction

Construction signs to notify residents, drivers, pedestrians and cyclists of construction activity and parking restrictions.

- **Temporary closure of the intersection at 19th Street/Herrin Avenue during work hours** – driveway access available at all times with flagmen to assist
- Installation of underground piping and vault lids on 19th Street
- Temporary parking restrictions and street closure in and around work area during work hours
- Delivery of material and use of heavy equipment – pipe material, backhoe, delivery trucks

Impacts

- No through-traffic 19th Street (local access will be provided to residents on 19th Street with flagmen to assist)
- Intermittent truck activity on Herrin Avenue, 19th Street and Redondo Avenue during work hours
- Immediate work area will be cordoned off
- Intersection and through-traffic will have access to 19th Street and Herrin Avenue before and after work hours
