

# Project Proposal

Prepared for: Bruce Beach

Prepared by: Innovative Sculpture Design LLC, Hunter Brown

June, 6 2023

## Project Details

Title: Harmony

Medium: 316 Stainless Steel

Finish: Automotive finished stainless-steel (color white) paired with a polished accent panel and mirror polished sphere.

Scale: 26'H x 15'6"W x 15'D

Weight: Approx 10,000lbs

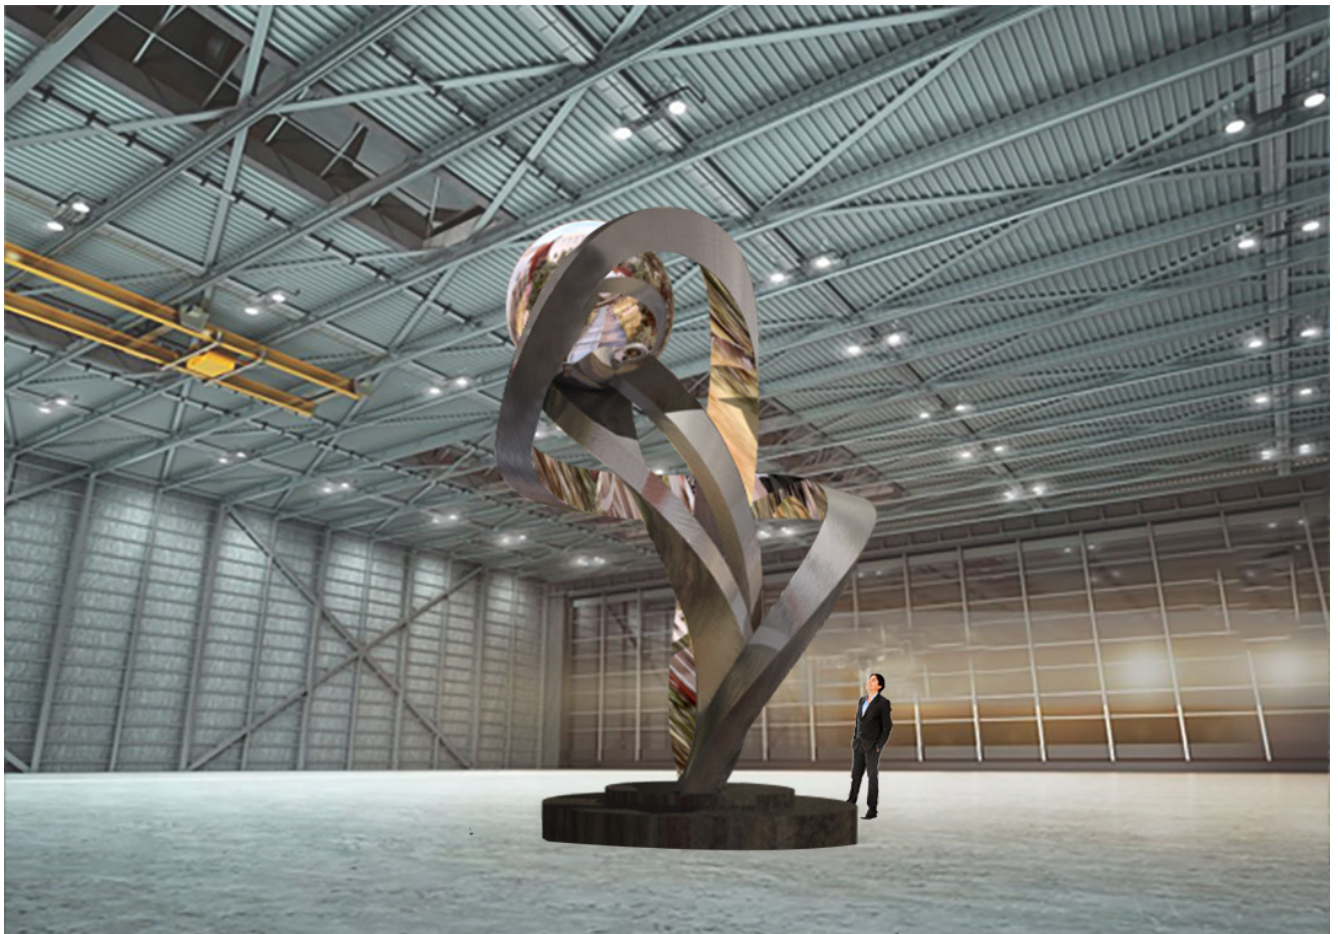

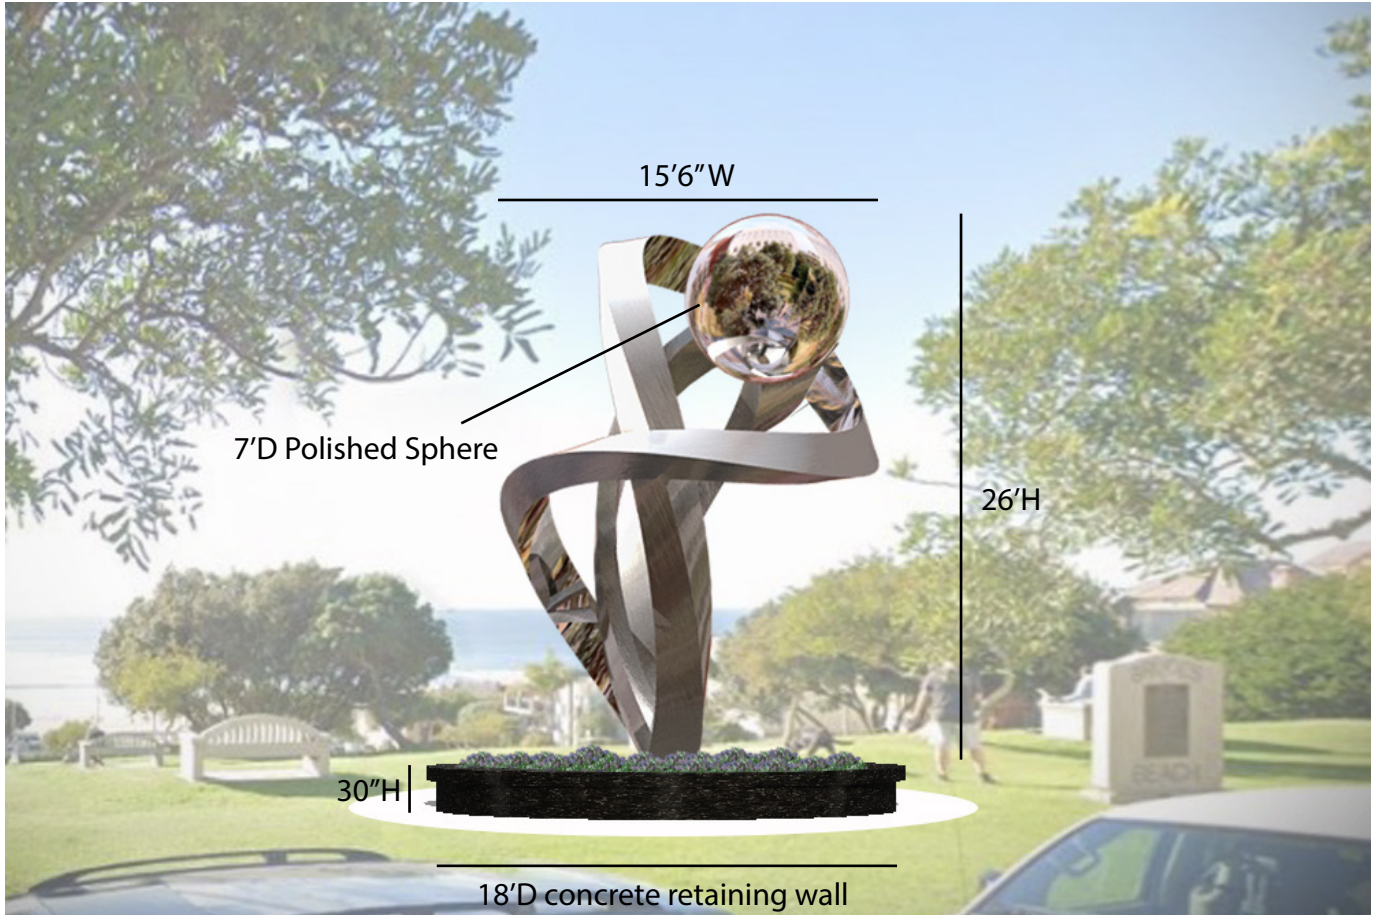

Base: 30"h concrete retaining wall with stain sealer

- structural specs for base / foot to be determined by structural engineer
- artwork is welded to a 8'D 1' steel plate with anchor holes
- plate is attached to concrete pad/footing 1' below retaining wall height, allowing 1' of landscape material to cover the attachment giving the appearance that the sculpture is growing out of the landscape bed. (mulch or river stone is an option for inside the retaining wall if maintenance/irrigation is a problem)

Location: Bruce Beach. California

# Scale

## Similar Finish Samples

## Project Outline

- Proposal submission June 2023
- Artist Selection
- Work with client to complete base, landscape, and hardscape details.
- Contract and Invoice
- Work with engineer on specs for base/footing

---

## Project Plan

We fabricate and complete all stages of the project at Innovative Sculpture Studio in Little Rock, AR. The 8000sq. ft. studio has high structural beams and plenty of space to produce monumental works in house. We have a growing team of assistants trained in all stages of the fabrication and finishing process.

The work is completely assembled before transport, requiring no assembly on site. We transport the artwork using an oversize haul service with escorts. The artwork is set in place on site with a crane and typically the anchors are set in the footing by my team during the installation. The piece is attached to the footing using threaded studs per structural spec. Installation is complete in one day.

This design is my design and will be unique to this location. There will be no duplications or reproductions.

## Maintenance

The piece is constructed in 11 gauge high chromium stainless steel (316 grade) and the sphere is constructed in 3mm thick 316 grade stainless. The material is designed to withstand the elements and the high chromium content protects the piece from oxidation in the harshest environments. The stainless surfaces are coated with transportation grade automotive finish and ceramic coating. The ceramic coating helps to protect the surface from UV and helps to deter water spots. The painted surfaces typically last 10-15 years in harsh elements with proper maintenance.

Maintenance includes washing the piece similar to washing a car. (If pressure washing the psi should be less than 3000psi with a non aggressive tip.) Water and mild soap can be used to wash the sculpture as needed. Applying a new ceramic coating annually helps to prolong the life of the artwork. I would be willing to discuss annual maintenance contracting. This would include washing, light buffing, and the ceramic coating. When the painted surfaces begin to break down artist team can refurbish the artwork on-site upon request.

## Footing

Footing drawings and details will be provided once the base design is confirmed. At that time I will contract a structural engineer to provide spec drawings. The piece will be mounted on a 1" steel plate that will be used to anchor the piece to the concrete footing. We will work with the architect to get bids for the site construction. Lighting does add great presence to the artwork at night. We can help with lighting design if this is of interest.

# Budget

Description	Quantity	Unit Price	Cost
<b>Materials</b>			
4'x10' 11g 316 sheet 2b	26	\$1,250.00	\$ 32,500.00

Dear members of the selection committee,

It is with great interest that I have learned of the public art opportunity for Bruce Beach. I am the proud owner of Innovative Sculpture Design LLC, a design and fabrication studio specializing in site-specific sculpture works in a variety of formats ranging from smaller residential installations to monumental public art and commercial art installations. After graduating from UCA I opened Innovative Sculpture Studio in Little Rock, AR, where I have now been creating sculpture for almost 10 years. The studio is 8000sq ft and is set up for simultaneous production of monumental works. I currently have a team of full-time assistants that are trained in all stages of fabrication and finishing.

My work can be found in permanent collections in over 25 states and 3 countries. My ability to work with curators, designers, and clients to produce world-class artwork that is both dynamic and place making can be seen in my body of work. Most of my projects are one of a kind, site-specific works designed with the intent to beautify the space they live in.

While my works are modern semi-abstract by design they typically are uplifting and represent a message of Unity and Strength. My proposed design is composed of twisting forms spiraling upward, where they converge around a polished sphere. I used the sphere in many of my works as a focal point but also to represent the world or the communities we live in. The twisting forms in the work represent the individuals in the community working together to embrace the sphere which represents the embodiment of the community. The sculpture itself appears to grow out of the ground in which it is routed which I think really ties it to the legacy of Will and Charles Bruce. The design has great movement and is dynamic by design. The movement creates interesting views from all angles and perspectives.

I would be honored to have the opportunity too create an iconic work that would honor the legacy of Will and Charles.

Thank you,

Hunter
