Peck Reservoir Replacement Project

The Peck Reservoir Replacement Project nears completion. Part of the overall project includes a two-inch conduit line to connect into the reservoir in 19<sup>th</sup> Street between Herrin Avenue and Redondo Avenue and vaults. The final work for the conduit line includes installing the tubing in the vaults.

It is anticipated that the installation of tubing will take approximately three (3) days.

### Impacts

- Temporary traffic control around work area

### Background

The Peck Reservoir Facility, built in 1957, was identified as a top priority and recommended to be replaced as part of the 2010 Water System Master Plan. The new Peck Reservoir will increase its capacity to eight million gallons and include new state-of-the-art filtration and other equipment to serve the Manhattan Beach community for the next 75 years and help ensure the long-term dependability of the water system in the community.
