WATER FLUSHING WILL OCCUR TUESDAYS & THURSDAYS BETWEEN 8:00 AM TO 1:30 PM

### MANHATTAN BEACH BOULEVARD

SEPULVEDA BOULEVARD

AVIATION BOULEVARD

2ND STREET

### DISCOLORED WATER?

Organic and naturally occurring sediments settle at the bottom of water supply lines. Flushing can cause the water passing through the pipes to speed up and the faster flow can stir up the sediment and cause your water to appear yellow or brown.

### IF YOU EXPERIENCE DISCOLORED WATER:

- Refrain from using water during flushing and for at least an hour after flushing ends. (Approx. 2:30 PM)
- Test your water from the closest outlet to the water meter. (Usually a hose bib outside)
- If the water runs clear, take the following steps to flush the rest of your system:
  1. Inside the home, remove any aerators from the kitchen and bathroom faucets. (Removing these will eliminate the chance of sediment getting stuck in the aerator screen.)
  2. Open all COLD water taps inside the home to full open position, including kitchen, bathroom, and shower faucets. Run at the same time for two minutes, until water runs clear.
  3. With faucet aerators still removed, open all HOT water taps to full open position for at least two minutes or until water runs clear.
  4. After flushing both cold and hot water taps, inspect the faucet aerators, clean if necessary, and reinstall.
